

Title

Make Decidim codebase more compatible with
agentic-development approach

Strategic direction

Reduce technical and functional debt

Is your proposal related to a problem?

Agentic-development approach will be a standard
in a near future and the results provided depends
a lot on the context we provide

Describe the solution you'd like

A default context ~~using standards~~ describing how to
write the code using our standards so we have
a better solution from the agents

Describes in steps how it should work

Study the current standards used by the current
code agents and write the context, where the agent
can get more details, ~~about~~ ~~and~~ how the
final solution ~~and~~ should be; and which steps
it should follow
