Title CRM / CMS / Drive-Integration library

Applicat° ~~creat°~~ in Decidim

Strategic direction

Expand interoperability

Is your proposal related to a problem?

- Double tracking in effort, especially for grassroots / self-organizing organizations (i.e. place content on our website and deciding ~~or~~ ^{generating})
- Need for more tools / collaboration not handled by Decidim

Describe the solution you'd like

Place in the admin interface where a set of possible integrations (i.e. Wordpress, cryptopost etc.) are visible, reducing double tracking i.e. because you have a second website.

Describes in steps how it should work

1. You visit the backend
- 2.

Critical perspective:

- maintenance
- outsource and reduce sustainability
- build code
