Overview of the research agenda

1

Evaluation of digital participation at the national level: the Brasil Participativo platform

2

Digital Participation: Affordances and Constraints during Democratic Restoration

3

Design Science Research (DSR) applied to digital participation

Proposes design principles for digital participation processes in order to be inclusive, interactive and effective

Research questions

- 1) What are the affordances and effects offered by a digital participation platform in the process of democratic restoration?;
- 2) What are the constraints hindering effective participation?

Research methods

Case study

Observation of the digital platform

Semi-structured interviews with public servants

Theoretical approach: Affordances & Constraints

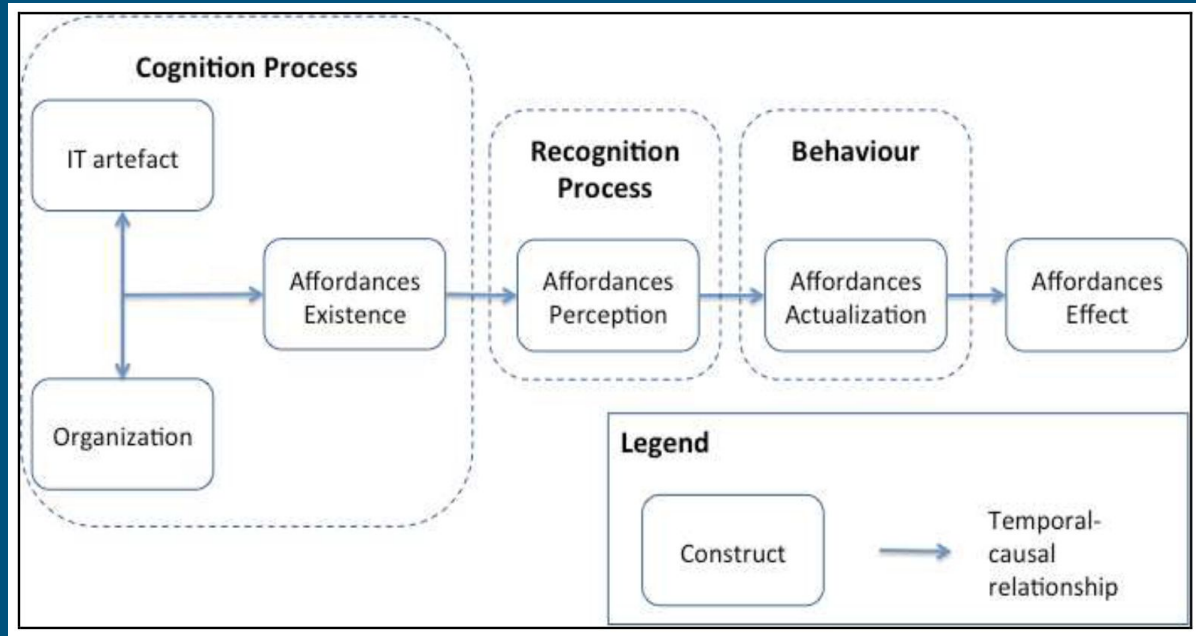

Affordances and constraints are not properties of the technology, nor properties of the individual, but they exist in the relationship of the individual (oriented by a goal), and the technology.

Gibson (1977); Norman (1990); Dini, Wahid and Saebo (2016)

Technology Affordance and Constraint Theory (TACT)

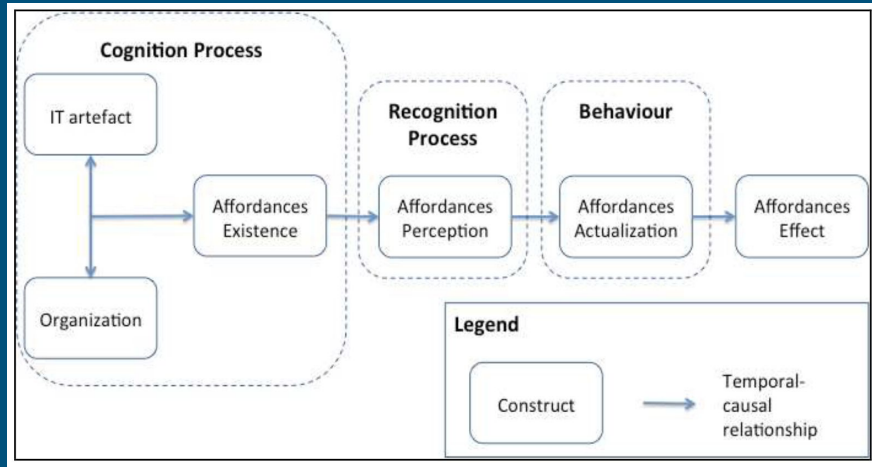

Affordances Theoretical Framework

Pozzi et al. (2014, p.3)

Affordances Theoretical Framework

AFFORDANCES

Constraints

Final considerations

- Some of the affordances were planned, some unpredicted, and some were constraining their effective participation
- How can we bring affordances and constraints to the design of the process?
 - Policymakers and technology designers should be building affordances that users can easily perceive (Leonardi, 2011).
 - It's not necessarily about changing the technology, as the same thing can both enable and constrain an action for actors oriented by different goals.
 - In this case, some of the constraints were imaginable, so how can this be embedded in the process design?

Thank you.
